AIRMAN'S INFORMATION MANUAL

AIRPORT DIRECTORY

SECTION IV

DECEMBER 1965

FEDERAL AVIATION AGENCY

INTRODUCTION

Sections IV and IV-A—AIRPORT AND AIRPORT/FACILITY DIRECTORIES

Sections IV and IVA contain an Airport Directory, a tabulation of Commercial Broadcast Stations, an Airport/Facility Directory, a tabulation of ARTCC Communications Frequencies, a listing of Flight Service Stations and Weather Bureau Telephone Numbers and a Master Alphabetical Index.

Section IV is published semi-annually and contains the Airport Directory which is a listing of all known airports, heliports, and seaplane bases available for transient civil use within the conterminous United States and indicates those airport services and facilities available at each. Heliports and seaplane bases serve a select group of users and are, therefore, tabulated separately following the airport tabulation. Military airports and privately owned and operated airports closed to civil aviation are not listed. This section also contains a listing of selected Commercial Broadcast Stations of 100 watts or more power.

Section IV-A contains an Airport/Facility Directory providing an integrated tabulation of major airports, heliports, and seaplane bases which have terminal navigaids and communications facilities available at the field. This tabulation combines all facilities and services available at each airport (heliport or seaplane base) or terminal area into a single listing, thereby eliminating the need to consult multiple tabulations to obtain and assemble the various types of information pertinent to a given terminal area.

In both Sections IV and IV-A, airports are listed alphabetically by geographical location (city or town) within each state. Where city and airports names are identical, the airport name is omitted. Airport names are sequenced alphabetically at locations having two or more airports. Airport name different from the city or location name are cross-referenced within Section IV. All major airports in Section IV-A are listed by name in Section IV, with a cross reference to its tabular listing in Section IV-A. Airports with a published instrument approach procedure are identified as an IFR airport by the letters "IFR" positioned immediately following the name.

Thus in Section IV, all airports within a given geographical location (city) area are listed under the city name. For example, under Cleveland, would be listed Burke Lakefront, Cleveland-Hopkins, and Cuyahoga Co. airports. These airports would also be listed alphabetically by name with a cross reference to the city-name tabulation (Cleveland in this case), making it possible to locate any airport whether or not the related city name is known.

The format of the Airport/Facility Directory in Section IV-A provides a grouping of airport data and services, terminal and enroute navigaids and communications facilities, each followed by pertinent remarks. Navigational aids and communications facilities are tabulated in Section IV-A only.

Airports listed in Section IV having terminal navigaid communications services available that are provided remotely from another (different name) facility, are cross-referenced to the different name airport in Section IV-A. The voice call and frequencies of the navigaid and communications services provided civil airports by a military facility are listed under the airport receiving the service in both Sections IV and IV-A.

Radar and non-radar communications services (approach, departure and advisory) are tabulated separately. Those services utilizing radar are listed under the head of "RADAR SERVICES". The letters "BCN" are shown following "RADAR SERVICES", when a transponder beacon is operated by the airport. All communications services provided by a military facility are radar monitored.

AIRPORT/FACILITY DIRECTORY LEGEND

LOCATION

The airport location is given in nautical miles (to the nearest mile) and direction from center of referenced city.

ELEVATION

Elevation is given in feet above mean sea level and is based on highest usable portion of the landing area. When elevation is sea level, elevation will be indicated as "00." When elevation is below sea level, a minus sign (-) will precede the figure.

RUNWAYS

The runway surface length, and weight bearing capacity are listed for the longest instrument runway or seaplane, or the longest active landing portion of the runway or strip, given to the nearest hundred feet, using 70 feet as the division point, i.e., 1468 feet would be shown as "14"; 1474 feet would be shown as "15". Runway lengths prefixed by the letter "H" indicates that runways are hard surfaced (concrete; asphalt; bitumen, or macadam with a seal coat). If the runway length is not prefixed, the surface is sod, alay, etc. The total number of runways available is shown in parenthesis. (However, only hard surfaced runways are counted at airfields with both hard surfaced and sod runways.)

RUNWAY WEIGHT BEARING CAPACITY

Add 000 to figure following S, T, TT and MAX for gross weight capacity, e.g., (S-000).

- S-Runway weight bearing capacity for aircraft with single-wheel type landing gear. (DC-3), etc.
 - T-Runway weight bearing capacity for aircraft with twin-wheel type landing gear. (DC-6), etc.
 - TT-Runway weight bearing capacity for aircraft with twin-tandem type landing gear. (707), etc.
- Quadricycle and twin-tandem are considered virtually equal for runway weight bearing considerations, as are single-tandem and twin-wheel.

A blank space following the letter designation is used to indicate the runway weight bearing capacity to sustain aircraft with the same type landing gear, although definite figures are not available, e.g., (T-).

Omission of weight bearing capacity indicates information unknown. Footnote remarks are used to indicate a runway with a weight bearing greater than the longest runway.

SEAPLANE BASE FACILITIES

A number preceding the parenthetical designation, indicates the number (quantity) available.

Beaching gear, consisting of the quantity and type of beaching gear available.

The number (quantity) if available, of Mooring Buoys (MB) and Crash Boats (CB) available.

LIGHTING

B: Rotating Light (Rotating beacon). (Green and white, split-beam and other types.) Omission of B indicates rotating light is either not available or not operating standard hours (sunset-sunrise).

NOTE.—Code lights are not codified, and are carried in Remarks.

L: Field Lighting (when code 14-7 is indicated, lighting 4, 5, 6, 7 is available). An asterisk (*) preceding an element indicates that it operates on prior request only (by phone call, telegram or letter). Where the asterisk is not shown, the lights are in operation or available sunset to sunrise or by request (circling the field or radio call). L by itself indicates temporary lighting, such as flares, smudge pots, lanterns.

- 1—Strip lights or portable runway lights (electrical)
- 2—Boundary
- 3—Runway Floods
- 4—Low Intensity Runway
- 5—Medium Intensity Runway
- 6—High Intensity Runway
- 7—Instrument Approach (neon)
- 8A, B, or C—High Intensity Instrument Approach

U.S. STANDARD (A)	LEFT SINGLE ROW (HIGH INTENSITY)	NEON LADDER
		

- 9—Sequence Flashing Lights (3,000' out unless otherwise stated)
- 10—Visual Approach Slope Indicator (VASI)
- 11—Runway end identification lights (threshold strobe) (REIL)
- 12—Short approach light systems (SALS)

Lighting (Con't)

- 13—Runway alignment lights (RAIL)
- 14—Runway centerline
- 15—Touchdown zone

Because the obstructions on virtually all lighted fields are lighted, obstruction lights have not been included in the codification.

SERVICING

- S1: Storage.
- S2: Storage, minor airframe repairs.
- S3: Storage, minor airframe and minor powerplant repairs.
- S4: Storage, major airframe and minor powerplant repairs.
- S5: Storage, major airframe and major powerplant repairs.

FUEL

- F1 80 oct., at least.
- F2 80/87 oct., or lower.
- F3 91/96 oct., or lower.
- F4 100/130 performance rating, or lower.
- F5 115/145 performance rating, or lower.

TURBINE FUELS

- TP-1 650 turbine fuels for civil jets.
- JP-1 (Kerosene), JP-3, JP-4, JP-5.

DAYLIGHT SAVING TIME

An airport located in a geographic area which normally converts to daylight saving time will be so identified by use of a code.

The two most common time periods during which daylight time is in effect in the conterminous United States are April 25–September 26 and April 25–October 31, and these are indicated as DT 1 and DT 2 respectively. The code "DT" by itself indicates that daylight time is in effect but not on the common time periods of DT 1 or DT 2. In such cases the applicable time period is footnoted in the airport remarks section.

Reference to daylight time will remain in the Airport Directory continuously.

OTHER

- AOE—Airport of Entry.
- VASI—Visual Approach Slope Indicator, applicable runway provided.
- RVV—Runway visibility, applicable runway provided.
- RVR—Runway Visual Range, applicable runway provided.
- TPA—Traffic Pattern Altitude—This information is provided only at those airports without a 24-hour oper-

ating control tower or without an FSS providing Airport Advisory Service. Directions of turns are indicated only when turns of the pattern(s) are to the right (non-standard). TPA data are related to the runway listed under the tabulated airport information. Generally, only one altitude is listed; however, at some airports two altitudes have been established; one for conventional aircraft and one for high performance aircraft. They are shown in this manner, TPA 8/15-R (increments of 100 feet). The higher figure being the higher performance aircraft altitude.

FSS—The name of the controlling FSS is shown in all instances. When the FSS is located on the named airport, "on fld" is shown following the FSS name. When the FSS can be called through the local telephone exchange, (Foreign Exchange) at the cost of a local call, it is indicated by "(LC)" (local call) with the phone number immediately following the name of the FSS, i.e., "FSS: WICHITA (LC481-5867)." When an interphone line exists between the field and the FSS, it is indicated by "(DL)" (direct line) immediately following the name of the FSS, i.e., "FSS: OTTO (DL)."

AIRPORT REMARKS

"FEE" indicates landing charges for private or non-revenue producing aircraft. In addition, fees may be charged for planes that remain over a couple of hours and buy no services, or at major airline terminals for all aircraft.

"Rgt Hc 13-31" indicates right turns should be made on landings and takeoffs on runways 13 and 31.

Remarks data is confined to operational items affecting the status and usability of the airport, traffic patterns and departure procedures.

Obstructions.—Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, such as trees, clearly discernible for contact operations, are frequently omitted. On the other hand, all pole lines within at least 15:1 glide angle are indicated.

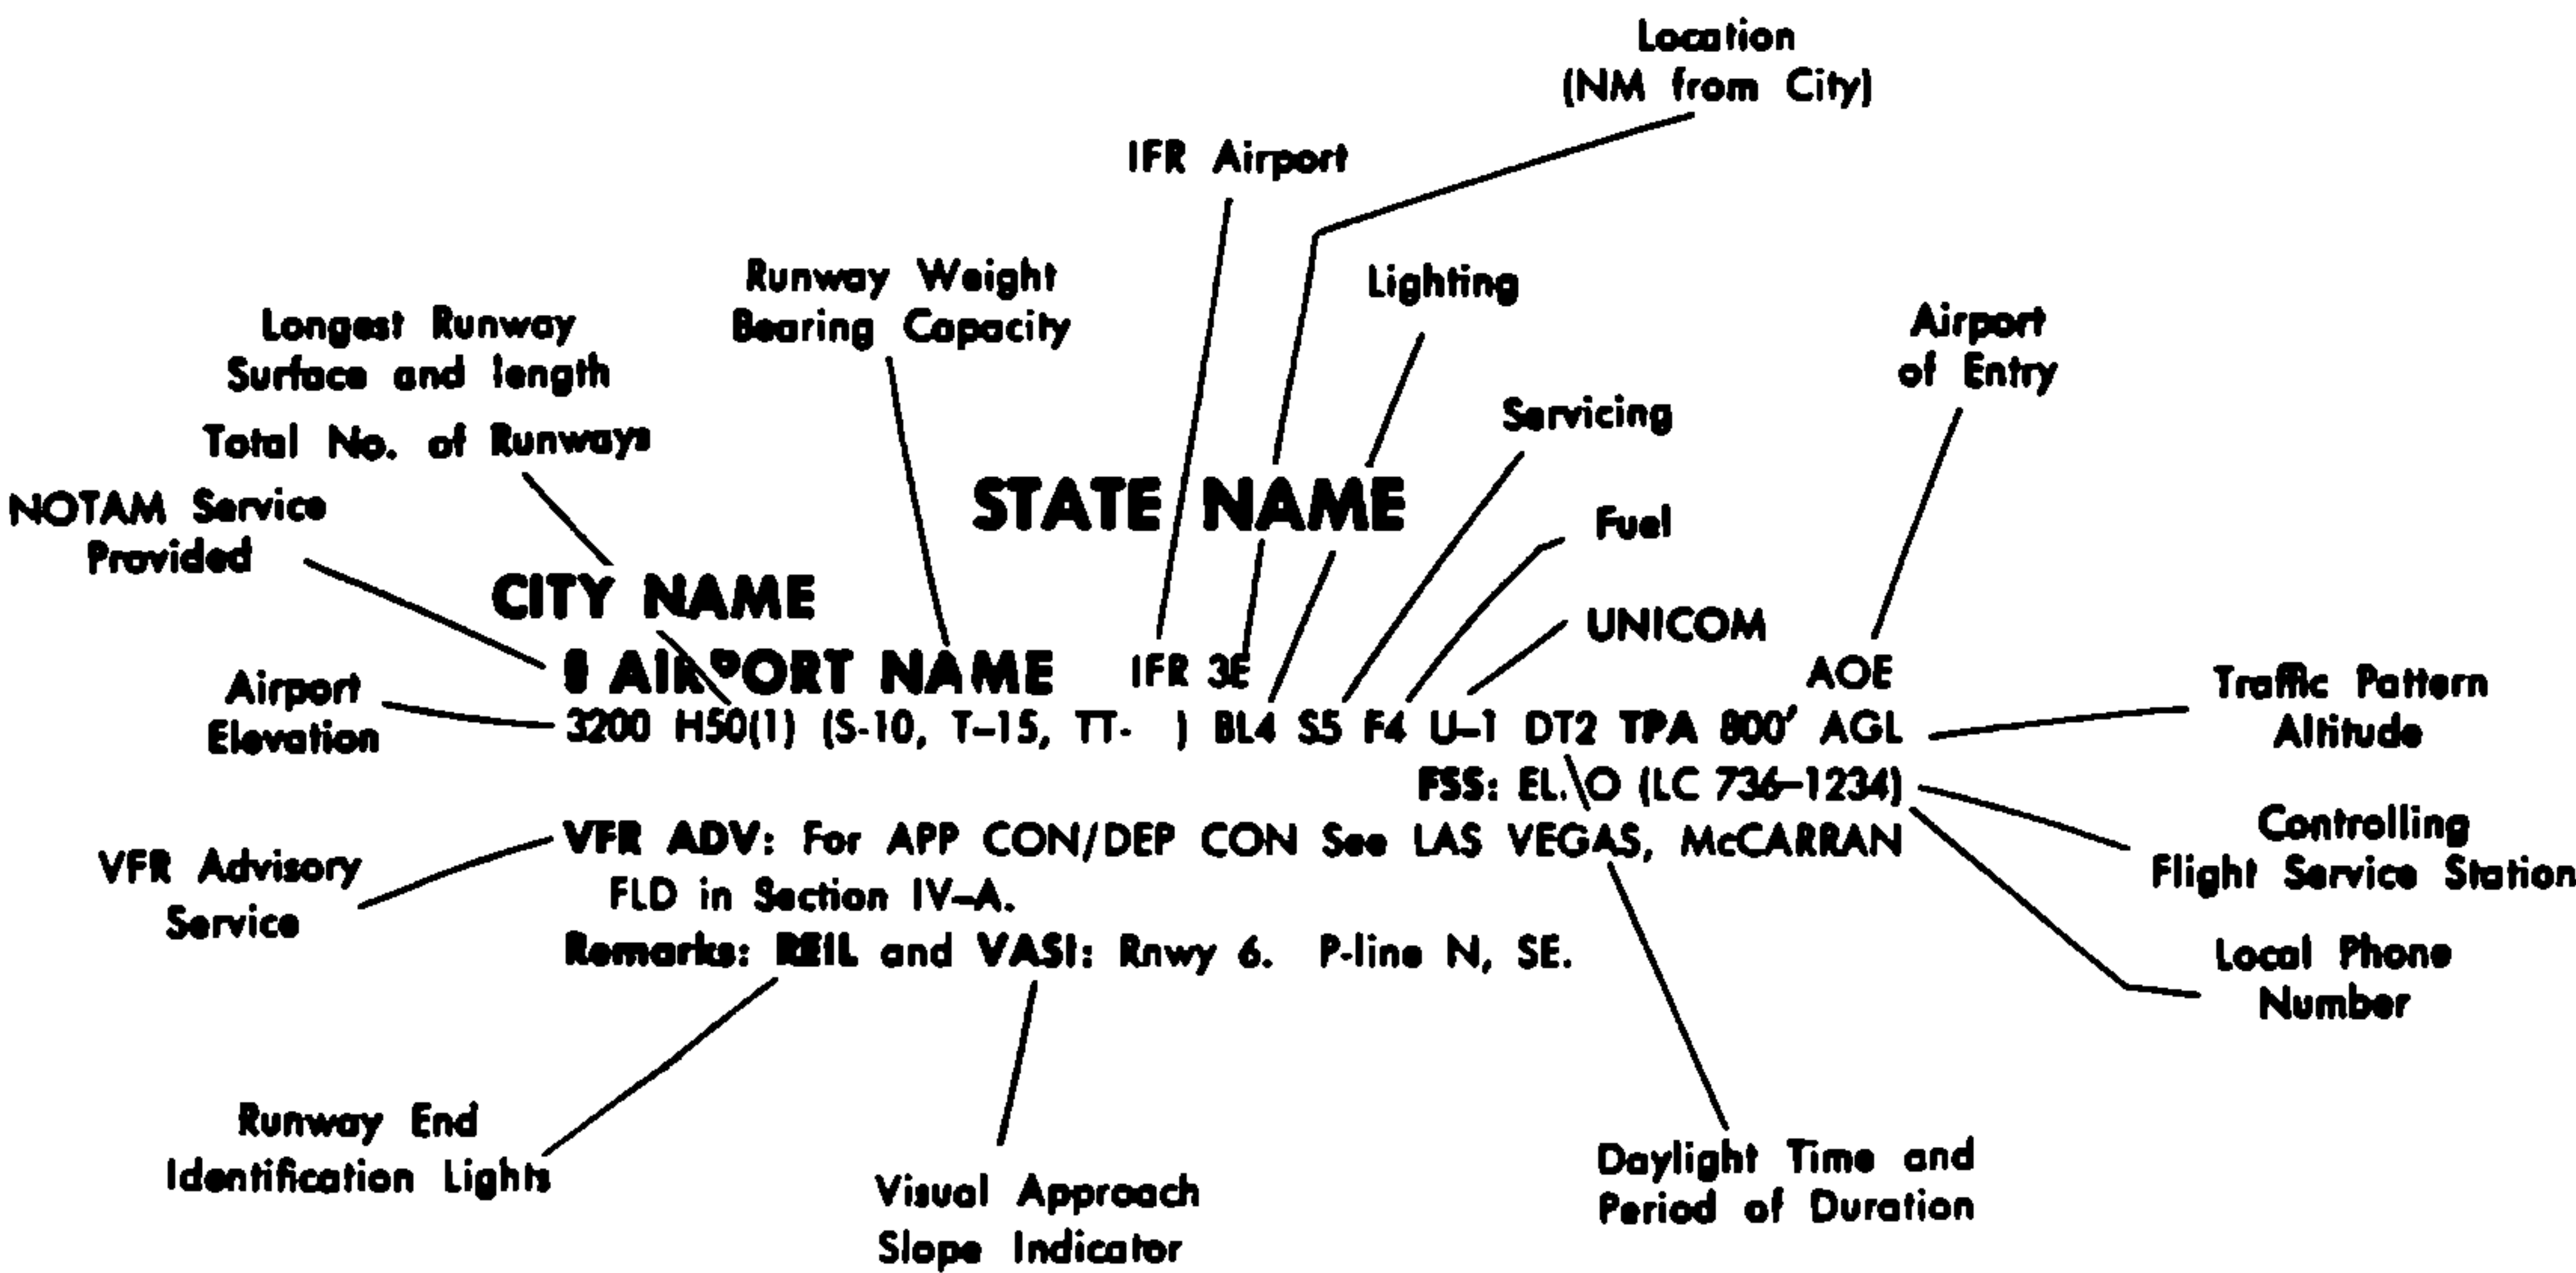

UNICOM

Private aeronautical station, operates same hours as the airport, transmits and receives on one of the following frequencies:

- U-1—122.8 mc (at airports without a control tower).
- U-2—123.0 mc (at airports with a control tower).

COMMERCIAL BROADCAST STATIONS

INTRODUCTION

The following listing contains only stations of 100 watts or more power. No station listing will be found for any locality for which we do not have any record of an airport. Also, because of space limitations, not all stations in every city are listed. We have attempted to show the most powerful station in a locality, and/or that station which maintains the longest hours of operation.

LEGEND
